

LangCorr

LangCorr is dedicated to developing digital solutions that help teachers save time

Technological progress in our modern world has resulted in many changes in the educational landscape. Today, most students actively use digital media, which has created a new set of challenges for teachers. However, the widespread use of digital media also represents a great opportunity for new approaches and techniques both inside and outside the classroom.

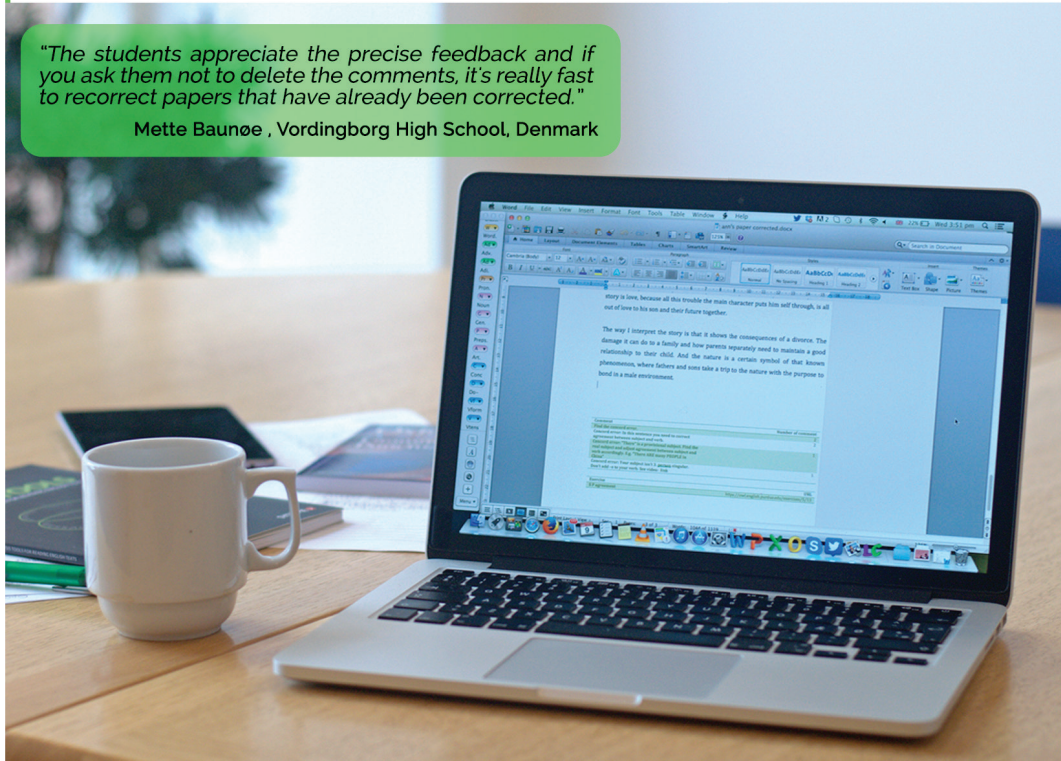

Language Corrector

On average, every language teacher spends at least 260 hours per year correcting papers. Those who have used Language Corrector report that they now spend 30% less time correcting papers. This gives them approximately 11 full workdays every school year that can be spent on more meaningful tasks.

"The students appreciate the precise feedback and if you ask them not to delete the comments, it's really fast to recorrect papers that have already been corrected."

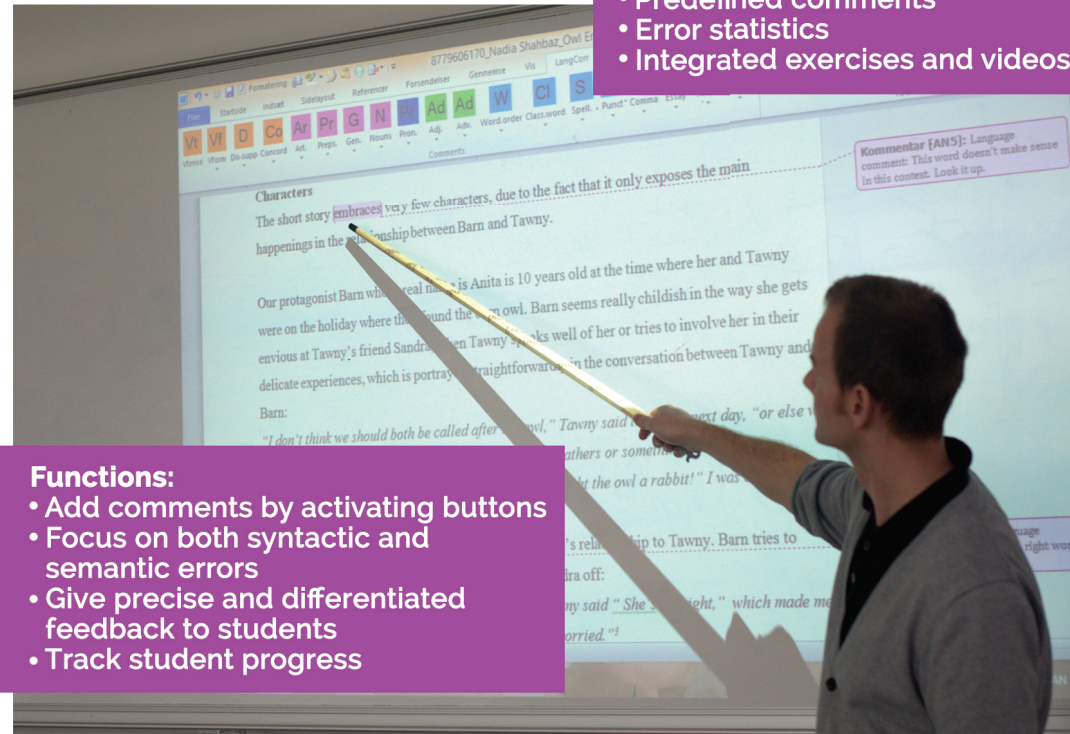

Mette Baunøe, Vordingborg High School, Denmark

Language Corrector is an innovative marking and feedback system. It is a toolbar that works as an add-on to Microsoft Word and allows teachers to give precise, customized feedback by simply pressing a button. Teachers can easily use predefined comments to address anything from grammatical errors and syntax issues to essay structure and analytical questions.

Features:

- Predefined comments
- Error statistics
- Integrated exercises and videos

Functions:

- Add comments by activating buttons
- Focus on both syntactic and semantic errors
- Give precise and differentiated feedback to students
- Track student progress

Screening Tests

It's clearly necessary to test your students' language proficiency level, but traditional screening tests are extremely time-consuming.

Our Screening Tests are language proficiency tests that will give a clear indication of your students' level of competency in reading, spelling, grammar, and syntax. Most importantly, you will get the results instantly and can begin customizing your teaching strategy for each student accordingly.

"The Screening Tests are easily accessible and they simplify our jobs because we get an overview of the results in one document. Before, we corrected screening tests manually, so we've saved a lot of time."

Ellen Weber Karlsen, VUC Aarhus, Denmark

Screening Tests

Features:

- Tests language proficiency
- Tests spelling, reading, grammar and syntax
- Instant results, no marking

Group Constructor

Group Constructor is a programme that allows teachers to create efficient groups in class in a very short time. The programme lets teachers construct groups based on 12 parameters that relate to gender, skill level and behaviour. This makes collaborative group work more rewarding and effective as a teaching strategy.

"The ability to tweak different parameters mean that the tool can be used flexibly and possibly beyond training and education."

Paul Ladley, Director, pixelfountain

Group Constructor

Features:

- Constructs efficient groups
- Choose your own parameters
- All kinds of didactic approaches
- Easy and fast to set up

Innovation

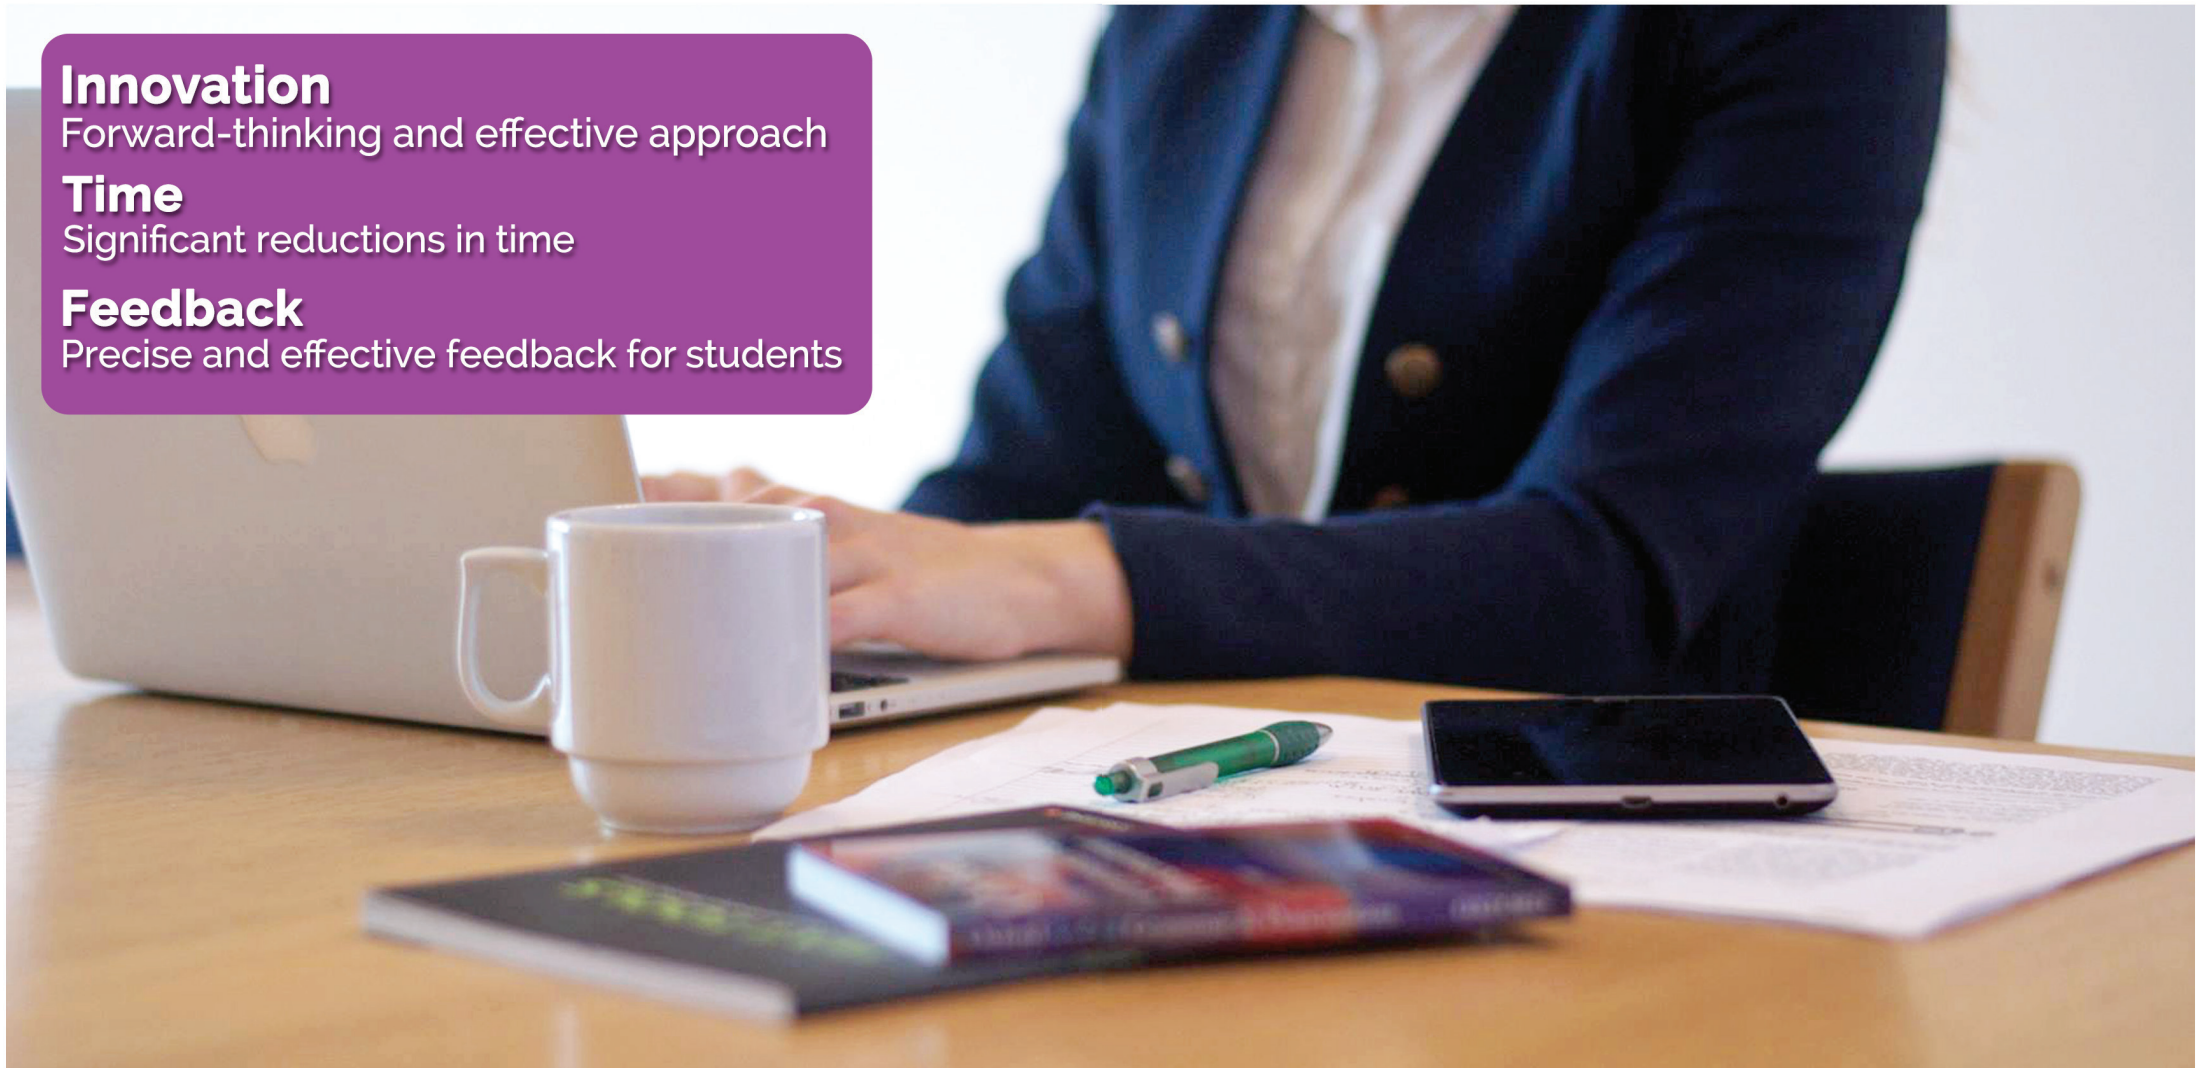

Forward-thinking and effective approach

Time

Significant reductions in time

Feedback

Precise and effective feedback for students
